

# SAFETY NOTICE

21<sup>st</sup> October 2015

We have had a recent incident where a chainsaw operator has suffered facial cuts and bruising after being struck by a branch, or crushed understorey, which was under tension.

He had been snedding and breaking down the crown of a previously felled Poplar.

When working on the crowns of hardwoods or big trees the chance of this happening is increased.

Please take this notice as a reminder to take extra care and time when working in a situation like this.

**Better to be slower and go home safe and sound.**

Regards

Steve Dresser
